

WHY TO USE AN ENVIRONMENTALLY FRIENDLY DRY CLEANER

Nearly all local dry cleaners use a toxic chemical cleaning solvent called perchloroethylene, (tetrachloroethylene) or commonly known as “perc.” **SimplyFresh Dry Cleaners is the only dry cleaner in Clermont County and first in the eastern Cincinnati area not to use perc.**

The U.S. Environmental Protection Agency (EPA)
The National Institute on Environmental Science
The World Health Organization and others...

Have found perc is a toxic chemical with human health and environmental concerns. Several states currently have legislation in place banning the use of perc.

The following are some of the hazards of perc:

It is a Neurotoxin, which means it can harm the brain and central nervous system

It can cause eye, skin and respiratory tract irritation

It is linked to liver and kidney damage

High doses cause memory loss, confusion, dizziness, fatigue, drowsiness, headache, nausea, weakness and unconsciousness

Perc has caused cancer in animals. Studies of people who have been exposed to perc suggest a connection between exposure and cancer.

We are Environmentally Friendly.

Healthier for You!
